Background Information

Journal of Forestry Research (JFR), a quarterly journal published by the Northeast Forestry University and the Ecological Society of China and cooperated with Jilin Academy of Forestry and Liaoning Academy of Forestry, started publication in 1990.

JFR has become an important science journal in forestry, with international impact. It has been attracting great attention from forestry scholars around the world. At present, around 60 percent of the papers published in JFR are submissions from international researchers, covering more than 40 countries. The JFR has been indexed & abstracted by, Chemical Abstracts, Biological Abstracts, BIOSIS Previews, CAB Abstracts, CAB International, Abstract Journal of VINITI(AJ), EMBiology, Geobase, Academic OneFile, SCImago, Index Copernicus, Zoological Record, Global Health, Google Scholar, OCLC, SCOPUS, Summon by Serial Solutions, as well as many Chinese literature databases. In addition, since 2007, the editorial office of JFR has collaborated with Springer-Verlag GmbH for print and online publication of the Journal. Each paper published in JFR is assigned a DOI (Digital Object Identifier) which is available in the online version of the article, and all the papers published in the Journal can be searched at <http://www.springerlink.com>. The article citation, utilization, and impact factor of JFR have been increasing year by year. In 2011, the total number of successful full text Downloads at <http://www.springerlink.com> reached approximately 31,130.

Aims & Scope

Aims: This publication is designed to report and disseminate the original research results, both theoretical and experimental, on forest ecology and forest resource science for promoting academic communication and exchange between Chinese and Western scientist and scholars in forestry. In addition, this publication also bears the mission of introducing Chinese academic achievements to the world scene, by demonstrating the unique features and special status of the Chinese forestry investigations.

Scope: The subject areas featured include all branches of forestry, both pure and applied, such as Forest management, Tree breeding, Silviculture, Forest ecology, Landscape ecology, Forest soil, Forest disease and insect, Wildlife ecology and management, Biology engineering and technology, Wood science, Technology of wood processing, Forest engineering. Journal of Forestry Research is intended primarily as a medium for reporting original research, both theoretical and experimental, although technical reviews, technical notes, and short communications are also included.

Submission of Manuscript

Manuscripts for publication should be submitted to Journal of Forestry Research through "Editorial Manager" system for online submission and online review (<http://www.editorialmanager.com/jfr/>).
